Hello! Goodbye! Congratulations!!! – Michael deLeon

cuong

Please join me for a double congratulations for [@Tue-Cuong Dong-Si \(Salesforce IoT\)](#). Cuong has been promoted to Senior Hybrid Engineer (SMTS). Today marks Cuong's 1 year anniversary.

In the span of 1 year, Cuong build a solid CI/CD platform that was the foundation for launching IoT Explorer into production with automated deployment and Testing. This same platform is being used for the IoT Enterprise initiatives as we continue through Steel Thread Initiatives. This was built entirely with PRD using Compute-Deploy services.

His system has been described as "flawless" by the engineers who use it and has 99.9% availability.

Cuong has a fluid skill set where he jumps from writing Python & Groovy scripts, and reviewing Java code, to solving tough kubernetes and network issues. He is collaborative and mentors engineers with his skills and exhibits Ohana in all he does.

He consistently finds solutions despite ambiguity and shows a flexibility and willingness to adapt.

In his new role, he will continue leading on new initiatives with IoT Enterprise, Dockerization initiatives. He will also lead initiatives to optimize our CI, integration, and Performance testing as we launch to production for IoT Enterprise.

I'm incredibly proud of his accomplishments and love having him on my team. He is a true rock-star.
